periods of 1991–1999 and 2000–2004, respectively**

Agricultural Experiment Stations of Alabama, Arkansas, Delaware, Florida, Georgia, Iowa, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Nebraska, North Carolina A&T, North Dakota, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and the United States Department of Agriculture cooperating.

The participating agricultural experiment stations and government agencies provide equal opportunities in programs and employment.

September 2012

Abstract

This research report provides state-level estimates of corn production, stocks, livestock and poultry feeding, food and industrial uses (including ethanol), and seed use. The estimates were made from U.S. level data on supply and utilization. States with an estimated net surplus had corn available for meeting estimated needs in deficit states and for the export market. Also included were exports and imports by major countries. Excel® spreadsheets are available for each table on the University of Nebraska–Lincoln website, <http://extension.unl.edu/pubs> with publication RB351.

Keywords: corn, corn supply, corn utilization, production, feed use, industrial use, exports, stocks, ethanol.

Acknowledgments

Dennis M. Conley supervised the development and production of this research report. It is the third in a series dating back to 1991. The original state-level supply and utilization estimates were tabulated by Matt G. Coble as part of his work toward an M.S. degree in agricultural economics. Steven B. Mitchell continued the work as a graduate student working on an MBA degree with a specialization in agribusiness. The result was Research Bulletin 345, *Corn Supply and Utilization in the United States, 1991-1999*, published as an NC-224 Multi-State Research Report by the Agricultural Research Division, Institute of Agriculture and Natural Resources, University of Nebraska–Lincoln. Christopher Kerr and Justin Stofer, both graduate students working on an MBA in agribusiness, updated the state-level estimates. The result was Research Bulletin 347, *Corn Supply and Utilization in the United States, 2000-2004*, published as an NC-1016 Multi-State Research Report by the Agricultural Research Division, Institute of Agriculture and Natural Resources, University of Nebraska–Lincoln.

The research was funded in part by Multi-State Research Project S-1043, Economic Impacts of International Trade and Domestic Policies on Southern Agriculture, and by Cooperative Agreement 58-3000-8-0046, Impacts of U.S. Ethanol Production upon the Markets for U.S. Corn and Distillers' Spent Grain, with the Markets, Trade and Economics Division (MTED), Economic Research Service (ERS), United States Department of Agriculture (USDA); and by financial assistantships for MBA Agribusiness students at the University of Nebraska–Lincoln.

Introduction

The U.S. Department of Agriculture regularly publishes estimates of the supply, disappearance, and ending stocks of corn at the national level. The following table from USDA's Feed Yearbook is an example.

Feed Yearbook, Table 4--Corn: Supply and disappearance (million bushels)

	Supply				Disappearance						
					Domestic use						
Mkt year 1/ 	Beginning stocks	Production	Imports	Total supply 2/	Food, alcohol, and Industrial use	Seed use	Feed and residual use	Total domestic use 2/	Exports	Total disappearance 2/	Ending stocks

1/ September-August.

2/ Total may not add due to rounding.

Source: USDA, World Agricultural Outlook Board, World Agricultural Supply and Demand Estimates and supporting materials.

The objective of this research report was to provide state-level estimates of the supply and utilization of corn by the specific categories shown for the national estimates. For consistency, the state-level estimates started with the national estimates from the Feed Yearbook, like above, and used other USDA data sources and additional estimation methods to arrive at state-level estimates. Similar to Feed Yearbook estimates, the state-level estimates were for corn only with no adjustments for distillers' grain. To the author's knowledge, no known public sources or reports have published similar state-level estimates of corn utilization along with extensive documentation.

The state-level estimates for the utilization of corn were a unique feature of this research report. These include live-stock and poultry for feed; food and industrial uses coming from the production of high fructose corn syrup, glucose and dextrose, starch, fuel alcohol (ethanol), beverage alcohol, cereals and other products; and seed use. Background data for the estimates were provided on state-level livestock and poultry numbers; wet and dry corn milling capacities; beverage alcohol state shares; and ethanol plant capacities.

The report included published estimates on corn production and stocks at the state level. When combined with the estimates of state-level utilization, a net surplus or deficit of corn was estimated for each state. The net surpluses in states were available to meet the needs of net deficit states and the U.S. export market.

Also provided were state-level annual average prices for corn; monthly export bids at selected U.S. ports of export; annual unit value, by country, of corn exports from the U.S.; exports to the top 20 countries; and exports and imports of corn from major countries outside the U.S.

The section of the report titled, *Documentation for the Tables*, gives users the capability to replicate the data in the tables and do their own research. Included were detailed website locations, screen shots of web pages showing highlighted choices from the menus, and the methods used to make the state-level estimates.

Documentation for the Tables

Supply

Corn production for each state for the years 2004-2010 were found on the National Agricultural Statistics Service's (NASS) interactive, online statistical database called Quick Stats 2.0. U.S. corn stocks for each state on September 1 were also found on the same website. See websites below for source of *Tables 1* and *2*.

The years listed on the NASS website were for crop years beginning on September 1 of the previous year and ending on August 31 the following year. For example, corn production for the year 2010, listed as 2009 on NASS, started on September 1, 2009 and extended to August 31, 2010.

Animal Numbers and Corn Consumption

Corn consumption by livestock in each state has not been published in any known public data source. For this research bulletin a four-step process was used to estimate state-level corn consumption by livestock.

First Step

The first step started with the *Feed Grains Database: Yearbook Tables* published online by the United States Department of Agriculture's (USDA) Economic Research Service (ERS). The numbers are based on quantities fed and feed per grain consuming animal unit given in *Tables 29 and 30*.

<http://www.ers.usda.gov/Data/Feedgrains/FeedYearbook.aspx>

You are here: [Home](#) / [Data Sets](#) / [Feed Grains Database](#)

Data Sets

Feed Grains Database: Yearbook Tables

The tables previously published annually in the *Feed Yearbook* are available as part of the Feed Grains Database. The tables will contain new information as data are added to the database. Additional historical data can be retrieved from the database using [Custom Queries](#).

For help understanding the datasets, see the [Documentation](#).

Historical (provides entire time series for the data):  Excel  PDF	
Processed Feeds and Grain-Consuming Indexes	
Table 29--Processed feeds: Quantities fed and feed per grain-consuming animal unit	October 14, 2011
Table 30--Indexes of feed-consuming animal units	October 12, 2011

In *Table 29*, corn consumed as an energy feed by livestock in 2007/08 was 148,793 thousand metric tons. The metric tons were converted to bushels by using 39.3679 bushels/metric ton. The estimated corn consumed by livestock was 5.858 billion bushels and covered the period from September 2007 through August 2008.

Table 29--Processed feeds: Quantities fed and feed per grain-consuming animal unit (1,000 metric tons)

Feed 1/		2005/06	2006/07	2007/08	2008/09	2009/10	2010/11	2011/12
Energy feeds	Corn (Sep-Aug)	155,330	140,726	148,793	131,625	130,174	122,006	119,386
	Sorghum (Sep-Aug)	3,548	2,868	4,188	5,907	3,573	3,155	1,651
	Barley (Sep-Aug)	1,041	1,360	911	990	931	938	769
	Oats (Sep-Aug)	2,137	2,088	2,024	1,977	1,796	1,572	1,595
	Wheat (Sep-Aug)	2,720	4,601	4,133	3,351	4,014	2,157	4,856
	Total energy feeds	164,776	151,643	160,049	143,851	140,488	129,829	128,257

Second Step

The second step used data from *Table 30* that showed Grain Consuming Animal Units (GCAU) for dairy cattle, cattle on feed, other cattle, hogs and pigs, poultry, and other livestock, for the U.S. The GCAU for each animal type was divided by the total GCAU to arrive at a percent of corn consumed for each animal type.

Table 30--Indexes of feed consuming animal units (millions)

Unit 1/		2005/06	2006/07	2007/08	2008/09	2009/10	2010/11	2011/12
Grain	Dairy	10.29	10.34	10.47	10.55	10.31	10.39	10.45
	Cattle on feed	22.05	22.44	22.72	21.23	20.90	21.49	22.52
	Other cattle	3.75	3.74	3.69	3.66	3.64	3.55	3.45
	Hogs	23.93	24.50	26.29	26.38	25.95	26.05	26.45
	Poultry	30.83	31.08	31.30	30.29	30.16	30.75	30.74
	Other livestock	0.64	0.64	0.63	0.63	0.63	0.63	0.62
	Total	91.49	92.75	95.12	92.75	91.60	92.85	94.22

For example, in 2008 dairy cattle represented 10.47 million GCAU out of a total of 95.12 million GCAU. This meant that 11.01 percent of corn consumed by livestock in the U.S. was consumed by dairy cattle. Using the same calculation, cattle on feed consumed 23.88 percent; other cattle and calves consumed 3.88 percent; hogs and pigs consumed 27.64 percent; poultry consumed 32.90 percent; and other livestock consumed 0.66 percent of corn for livestock feed. Estimated corn consumption in bushels and percentages by type of livestock for 2004-2010 are shown below.

Year	Corn Consumption by Livestock (bushels)	Percent Consumed by Dairy Cattle	Percent Consumed by Cattle on Feed	Consumed by Cattle and Calves	Percent Consumed by Hogs and Pigs	Percent Consumed by Poultry	Percent Consumed by Other Livestock
2004	5,781,188,602	11.32%	23.84%	4.13%	26.07%	33.93%	0.71%
2005	6,135,014,800	11.27%	23.67%	4.12%	26.17%	34.06%	0.71%
2006	6,115,015,907	11.25%	24.10%	4.10%	26.15%	33.70%	0.70%
2007	5,540,087,095	11.15%	24.20%	4.04%	26.42%	33.51%	0.69%
2008	5,857,667,945	11.01%	23.88%	3.88%	27.64%	32.90%	0.66%
2009	5,181,799,838	11.38%	22.89%	3.95%	28.45%	32.66%	0.68%
2010	5,199,948,439	11.10%	22.49%	3.92%	27.92%	32.52%	0.68%

Third Step

The third step estimated the bushels consumed by type of livestock. For 2008, the 5.858 billion bushels of corn consumed by all livestock were multiplied by the percent consumed by each type. The result was 0.645 billion bushels (5.858 billion bushels x 11.01 percent) consumed by dairy cattle, 1.399 billion bushels consumed by cattle on feed, 0.227 billion bushels consumed by other cattle and calves, 1.619 billion bushels by hogs and pigs, 1.927 billion bushels by poultry and 0.039 billion bushels consumed by other livestock. These estimates for 2008 are shown on the bottom line of *Table 17* in this research bulletin. Adjacent tables show the results for the other years.

Fourth Step

The fourth step estimated the bushels of corn consumed by each type of livestock in each state. The data for each type were gathered at the state level, and were found on USDA's National Agricultural Statistics Service (NASS) interactive, online statistical database, called Quick Stats 2.0.

Dairy cattle were the sum of: 1) milk cows, and 2) heifers weighing more than 500 lb to replace milk cows. Shown in *Table 3* of this research bulletin, the figure for Nebraska was 77,000 head on January 1, 2008. This number was divided by the total dairy cattle in the U.S. of 13,672,000 to arrive at 0.56 percent for Nebraska. This was multiplied by the 0.645 billion bushels of corn consumed by dairy cattle in the U.S., and resulted in Nebraska's estimate being 3.6 million bushels as shown in *Table 4* in this research bulletin. Similar calculations were performed for each state.

Table 5. Cattle on Feed, Head by State and U.S., 2004-2010

Source: Cattle on feed inventory, Census of Agriculture Database, Quick Stats 2.0, National Agricultural Statistics Service, USDA

<http://quickstats.nass.usda.gov/> Follow instructions for website shown for *Table 3*.

The fourth step as described above was repeated for cattle on feed using the Quick Stats 2.0 database. In Nebraska, the January 1, 2008 cattle on feed inventory was 2,700 thousand head as shown in *Table 5* of this research bulletin. This number was divided by the total number of cattle on feed in the U.S. of 14,827 thousand head to arrive at Nebraska's percentage of 18.21. This was multiplied by the 1.399 billion bushels of corn consumed by cattle on feed in the U.S., and resulted in Nebraska's estimate being 254.8 million bushels as shown in *Table 6* in this research bulletin. Similar calculations were performed for each state.

Table 7. Cattle and Calves, Head by State and U.S., 2004-2010

Source: Cattle, including calves inventory, Census of Agriculture Database, Quick Stats 2.0, National Agricultural Statistics Service, USDA.

<http://quickstats.nass.usda.gov/> Follow instructions for website shown for *Table 3*.

The fourth step described above was followed for other cattle and calves. However, direct data was not readily available and required some calculations. The other cattle and calf numbers were estimated by subtracting the total number of dairy cattle and cattle on feed from the total number of cattle (including calves). In 2008, Nebraska had 3.67 million other cattle and calves as shown in *Table 7* in this research bulletin. When divided by the total number of other cattle and calves in the U.S., Nebraska had 5.43 percent of the country's other cattle and calves. This was multiplied by 0.227 billion bushels of corn consumed by other cattle and calves in the U.S. to arrive at 12.3 million bushels for Nebraska as shown in *Table 8* in this research bulletin. Similar calculations were performed for each state.

Table 9. Hogs and Pigs, Head by State and U.S., 2004-2010

Source: Hogs inventory, Census of Agriculture Database, Quick Stats 2.0, National Agricultural Statistics Service, USDA.

<http://quickstats.nass.usda.gov/> Follow instructions for website shown for *Table 3*.

The hogs and pigs inventory for each state was gathered from Quick Stats 2.0. On December 1, 2008, Nebraska had 3.35 million head shown in *Table 9* of this research bulletin. When divided by the total number of hogs and pigs in the U.S., Nebraska had 4.91 percent of the U.S. total. This was multiplied by 1.619 billion bushels of corn consumed by hogs and pigs in the U.S. to arrive at 79.5 million bushels for Nebraska as shown in *Table 10* in this research bulletin. Similar calculations were performed for each state.

Table 11. Poultry, Head by State and U.S., 2004-2010

Source: Poultry inventory data was gathered from the USDA's National Agricultural Statistics Service (NASS) publications. The poultry category includes chickens, broilers, and turkeys. The publication titled *Chicken and Eggs 2009 Summary* published in February 2010 had the chicken numbers on reference page 43. Another publication, titled *Poultry — Production and Value 2009 Summary*, had the broiler numbers on reference pages 2 and 3, and turkey numbers on reference pages 6 and 7. All the three figures were added to arrive at the total number in each state.

In 2008, Nebraska had 18.957 million head of poultry which turned out to be all chickens that year. When divided by the U.S. total, Nebraska's share was 0.195 percent of all poultry. When multiplied by 1.928 billion bushels consumed by poultry in the U.S., 3.75 million bushels of corn were consumed in Nebraska as shown in *Table 12* of this research bulletin. Similar calculations were performed for each state.

Other Livestock

The bushels of corn consumed by dairy cattle, cattle on feed, other cattle and calves, hogs and pigs, and poultry were summed to arrive at a subtotal. The subtotal was used to estimate Nebraska's share of corn consumed in the sixth category, other livestock. For the year 2008, the estimates for each of the five types of livestock along with the subtotal are shown in *Table 17* of this research bulletin. In Nebraska, the subtotal of 352,685 thousand bushels was divided by the U.S. subtotal of 5,818,827 thousand bushels to arrive at Nebraska's share of 6.06 percent. This was multiplied by 0.039 billion bushels consumed in the U.S. by other livestock to arrive at 2.35 million bushels of corn consumed by other livestock in Nebraska. The subtotal for the first five categories was added to consumption by other livestock to give an estimated 355 million bushels of corn consumed by all livestock in Nebraska. Similar calculations were done for each state.

Tables 13-19. Livestock and Poultry Corn Consumption by Animal Type, by State and U.S., 2004-2010

Table 20. Total Livestock and Poultry Corn Consumption, by State and U.S., 2004-2010

Tables 13-19 and 20 were tabulated from the estimates made in previous tables.

Food and Industrial Use

Table 21. Corn Wet Mills, Excluding Ethanol Capacity, by State, 2005 and 2008

Source: Galitsky, Worrell and Ruth. *Energy Efficiency Improvement and Cost Saving Opportunities for the Corn Wet Milling Industry*, Appendix A: Estimated corn wet milling company capacities grouped by main product, page number 72.

A list of wet mill corn processing plants and their respective capacities was obtained from a report titled, *Energy Efficiency Improvement and Cost Saving Opportunities for the Corn Wet Milling Industry*, by C. Galitsky, E. Worrell, and M. Ruth, page 72. The authors acknowledged Steve Eckhoff as the source of that data.

Table 22. Corn Dry Mills, by State, 2004 and 2008

Source: *Other U.S. Grain Mills, Grain and Milling Annual*, Sosland Publishing, 2008, 2009, and 2010. Personal communication with Dana Holt from Sosland Publishing Co., Kansas City, Mo., Sept. 23, 2010.

A list of dry mill corn processing plants and their respective capacities was put together with information from several sources. The majority of the information came from the *Grain and Milling Annual* published every year by the Sosland Publishing Company (www.sosland.com). Personal communication was held with those companies that did not indicate their capacity in the *Grain and Milling Annual* in order to determine their respective capacities. Included were only those mills verified to be processing corn at the time of this writing. The dry milling industry was constantly changing with mills closing down, merging, and others opening on a frequent basis. The dry mill corn processing plants reported their capacities in terms of a daily grind reported in hundred weight (cwt). It was assumed that the mills operate at 90 percent capacity and for 325 days in a year. The daily grind capacity was multiplied by 325 in order to get the total quantity of corn utilized by the dry mill corn processing plants.

Tables 23 and 24. Beverage Alcohol Distilleries, by State, 2002 and 2007

The 2002 and 2007 Economic Census gave a list of distilleries, by state, with their respective number of employees or range of employees. Data in *Tables 23* and *24* show each state's share of employees, relative to the total for all states with distilleries, as an estimate of the state's capacity for producing beverage alcohol. Actual capacity figures were not available. The state's share of employees was used to estimate the respective amount of corn each state used for beverage alcohol. The estimates in *Table 23* were for the years 2004-06, and those in *Table 24* were for 2007-10.

Table 25. Ethanol Plant Capacity Using Corn for a Feedstock, by State and U.S., 2004-2010

Source: *Ethanol Production by State and Plant Capacity* was obtained from the website of the Nebraska Energy Office.

http://www.neo.ne.gov/statshtml/122_201009.htm

Official Nebraska Government Website				
Ethanol Facilities Capacity by State and Plant				
As of September 2010, the United States had the nameplate capacity to produce 13,765.4 million (13.8 billion) gallons of ethanol, operating refineries producing 12,935.9 million (12.9 billion) gallons of ethanol per year, and had construction or expansion plans for an additional 837 million (0.8 billion) gallons. There were 204 refineries. If no operating production is listed in the table below, the plant has been idled. Nebraska's nameplate capacity was 1,764 million gallons, or 13 percent, of the nation's nameplate capacity. Nebraska's operating production was 1,739 million gallons, or 13 percent, of the nation's operating production. Nebraska had construction or expansion plans for an additional 113 million gallons of capacity. The ethanol section of the state energy office's energy statistics has more information. See the archive for reports from prior months.				
Fuel Ethanol Facilities Capacity by State and by Plant (Million Gallons Per Year as of September 2010)				
State Company	Location	Nameplate Capacity	Operating Production	Under Construction/ Expansion Capacity
United States		13,765.4	12,935.9	837.0
Arizona				
Pinal Energy, LLC	Maricopa, AZ	55.0	55.0	NA
Arizona Total		55.0	55.0	NA
California				

Ethanol production capacity by plant and state was collected for September of the respective year. The archive link gave estimates for each month and year. Current capacity was used for the years 2005-2007; operating capacity for 2008; and the name plate capacity for 2009-2011. For some years, the capacity given on the website for the United States was greater than the sum of the capacity for each state. The latter sum and state-level estimates were used for this research bulletin.

Tables 26-32. Food and Industrial Use, by State and U.S., 2004-2010

Source: *Feed Grain Database: Yearbook Tables, Corn: Food, Seed, and Industrial Use*, Table 31, Economic Research Service, USDA.

High Fructose Corn Syrup (HFCS), glucose and dextrose, and starch were allocated according to wet mill capacities in each state. Beverage alcohol, cereals and other products were allocated according to dry mill capacities in each state.

Corn Feed, Seed, and Industrial Uses	
Table 31--Corn: Food, seed, and industrial use	October 12, 2011

The food and industrial uses of corn were listed by six categories in *Table 31*. For 2008, the table listed corn consumption, in million bushels, as follows:

HFCS	Glucose and Dextrose	Starch	Alcohol		Cereals and Other Products
			Fuel	Beverage	
522.77	255.96	264.66	3049.21	135.40	192.40

In general, high fructose corn syrup (HFCS), glucose and dextrose, and starch are processed in wet mills. Ethanol (fuel alcohol) was processed in ethanol plants. Beverage alcohol, cereals and other products were processed in dry mills. In order to allocate the bushels consumed in each of these categories to individual states, the capacity of each dry mill, wet mill, and ethanol plant was used.

Wet Mills

The bushels of corn consumed in the food and industrial category were allocated to each state’s percentage of the industry’s capacity. For example in 2008, Nebraska’s 24-hour, wet-mill grind capacity was 475,000 cwt (hundred weight) and the nation’s capacity was 4.54 cwt. Nebraska’s share was 10.46 percent of the nation’s total. See *Table 21* in this research bulletin. Since HFCS, glucose and dextrose, and starch are manufactured at wet mills, and using the national figures from *Table 31* of the *Feed Grains Database: Yearbook*, it was estimated that Nebraska mills consumed 54.6 million bushels of corn in 2008 for HFCS; 26.7 million bushels for glucose and dextrose; and 27.6 million bushels for starch. See the respective columns for *Table 30* in this research bulletin. This calculation was performed for each state with wet mills.

Dry Mills

In 2008, Nebraska’s 24-hour, dry-mill grind capacity was 63,000 cwt and the nation’s capacity was 734,805 cwt which meant Nebraska’s share was 8.57 percent of the nation’s total. See *Table 22* in this research bulletin. Since cereals and other products are manufactured at dry mills, and using the national figures from *Table 31* of the *Feed Grains Database: Yearbook*, it was estimated that Nebraska mills consumed 16.49 million bushels for cereals and other products. See the respective columns for *Table 30* in this research bulletin. This calculation was also performed for each state with dry mills.

Ethanol Plants

In 2008, Nebraska’s ethanol plant capacity was 1,296 million gallons per year, and the nation’s capacity was 10,213 million gallons per year. See *Table 25* in this research bulletin. Nebraska’s share of the nation’s total was 12.69 percent. This percentage was multiplied by the 3,049 million bushels used in the industry (*Table 31* in the *Feed Grains Database: Yearbook*) to determine that Nebraska used 387 million bushels to make fuel alcohol. See the Fuel Alcohol column for *Table 30* in this research bulletin. This calculation was performed for each state with ethanol plants.

Beverage Alcohol

In 2008, the U.S. amount of corn estimated by USDA that goes into beverage alcohol was 135.4 million bushels (*Table 31* in the *Feed Grains Database: Yearbook*). As an example, from *Table 24* Kentucky had a 37.8 percent share of all the U.S. employees. In *Table 30* for 2008, the estimated result for Kentucky was 51.225 million bushels. This calculation was performed for each state with distilleries.

By adding the bushels together for each milling process, each state’s corn use for the food and industrial category was determined. For example, in 2008 Nebraska consumed an estimated 524 million bushels of corn for food and industrial uses. See the Total column for *Table 30* in this research bulletin.

Table 31. Total Food and Industrial Use, by State and U.S., 2004-2010

Table 31 was tabulated from estimates made in previous tables.

Acres Planted and Seed Use

Table 34. Acres Planted to Corn, by State and U.S., 2004-2010

Source: Corn Area Planted, Census of Agriculture, Quick Stats 2.0, National Agricultural Statistics Service, USDA.

<http://quickstats.nass.usda.gov/> Follow the instructions shown in Table 1.

Table 35. Seed Use for Corn, by State and U.S., 2004-2010

Source: Feed Grain Database: Yearbook Tables, Corn: Food, Seed, and Industrial Use, Table 31, Economic Research Service, USDA.

<http://www.ers.usda.gov/Data/Feedgrains/FeedYearbook.aspx> Follow the instructions shown for Table 4.

State seed use estimates were based on each state's share of acres planted, relative to U.S. acres planted, and that share applied to total seed use in the U.S. For example, in the spring of 2008 there were 9.40 million acres of corn planted in Nebraska and 93.527 million acres for the U.S. Nebraska's share was 10.05 percent. Total seed use in the U.S. was 21.848 million bushels. Multiplying 10.05 percent times 21.848 million bushels planted gave seed use in Nebraska of 2.195 million bushels. Similar calculations were done for each state.

Domestic Supply, Use and Net Surplus or Deficit

Table 36-42. Domestic Supply, Use, and Net Surplus or Deficit, by State and U.S., 2004-2010

Tables 36-42 were tabulated from estimates made in previous tables.

Table 43. Corn Net Surplus or Deficit, by State, 2004-2010

Net Surplus or Deficit = Beginning Stocks + Corn Production - Livestock and Poultry Consumption - Food and Industrial - Seed Use - Ending Stocks

Net surplus was an estimate of the amount of corn available for movement to net deficit states or into the export market.

Inspected for Export

Tables 44-51. Corn Inspected and/or Weighed for Export, by Region and Port Area, 2004-2010
